**Let's talk
about project**

developer (PHP + JS)

about me:

I passionate about creating functional and beautiful applications
and I have been doing it for **4 years (experience)**

and my purpose now is

to get into an interesting project(s) and to get invaluable experience of
creating high-quality intense web applications as a part of smart
professional team;

My skills:

back-end

I use **PHP 7+**.

I have experience in developing applications on **Symfony** (+ Doctrine), **Laravel** , **Phalcon** and **YII2**.

I can write applications using raw **PHP** with **OOP**, but I prefer frameworks (Symfony and Laravel are
preferable).

I worked with relational DBMSs: **MySQL, MariaDB** and **SQLite** and I can write raw **SQL** queries
with joins, grouping, indexing and so on.

I also worked with documentary DBMS **MongoDB**.

And I used **Memcached** and **Redis** as no-SQL storage.

As a test library I used to work with **PHPUnit**.

I know how to start and adjust **Nginx** and **Apache** web servers.

I am **Linux (Ubuntu)** user and I know what is **bash** and how to work in a **terminal**.

And I use **GIT** as version control system and I worked with **SVN**.

I worked with **Docker (+ docker-compose)** and **Vagrant**

I have experience with **OpenCart**, **October CMS** and I wrote plugins for **WordPress** and Opencart.

Also I worked with **API**s: **Amazon AWS** (domains registration)**, Google Maps**, **Facebook**, **VK** and others.

And I worked a little with **ElasticSearch**.

Currently I learn **Node.js (+ Express)**.

front-end

I wrote UI on **html5** and **css3** , I used **Twitter Bootstrap** , **LESS**, wrote **GULP** tasks, used **npm** dependency manager.

I wrote front-end logic on pure **JavaScript** , some on **JQuery** and libraries based on it and I know how to work with **AJAX** .

And currently I **learn React.js**

I also have little experience with **Angular 5 (and TypeScript accordingly)**

other skills

My **English** level is **upper intermediate**

I use **PHPStorm** IDE and **Sublime Text** for coding and I use **XDebug** for debugging

I have core knowledge of **SEO** , I know how to work with **Google Analytics** and **Webmaster tools** .

And I have little experience with **Figma**.

I edit pictures with **PhotoShop, Pinta** and some other photo and video editors.

My experience:

Total: **4 years**

January 2019 - now (6 months)

PHP developer in   **Ciklum**

I took part in 2 projects:

“☍   **Scayla** - is an ERP system.

As a part of SCRUM team (one of 7 PHP developers) I developed API.

I worked with: **Symfony 4, MySQL, Docker, PHPUnit, JWT**

☍   **lottery24.com**

I changed layout of group of pages, and added several new features

I worked with: **custom legacy PHP engine, jQuery**

Fabruary 2018 - November 2018 (9 months)

PHP developer in   **Cosmonova**

I developed API and backoffice (new features, new modules + old code refactor) as a part of a 4 back-end developers team in a project:

Mmjitsu - CRM + ERP system for USA market.

System has wide range of used technologies. I personally worked with **PHP 7.1, custom Symfony 3.4, MongoDB, Doctrine ODM, YII 2, Docker,** a little with **MySQL, ElasticSearch, Angular 5, Phalcon** etc.

June 2017 - December 2017 (7 months)

PHP developer in   **AtticLab** - financial sowtware development.

I took part in 3 projects:

%   **Coinlancer MVP** - is a freelancers exchange with cryptocurrency payments and
SmartContract technology.

My role was to create REST API by myself from scratch to the working MVP

I worked with: **Phalcon, Docker, MySQL, Memcache, JWT**

Wordpress (WooCommerce) and Opencart plugins - I wrote by myself payment gateways for
Coinslot (cryptocurrencies payments)

I worked with: **WordPress, Opencart, cURL**

AWS domains - I made service (presented as API) of registering domains from **Amazon Web
Services** for company's client.

I worked with: **Yii 2, Docker, API, Basic Auth, AWS**

February 2017 - May 2017 (4 months)

**Freelance   During this time I've made internet shop and was engaged in self-development and
trainig:**

%   **floks.com.ua** - internet shop on OpenCart, where I improved CMS checkout logic, made
design and responsive markup, added and customized several modules.

During this time I also:

- Have become **Ubuntu** user
- Studied theory: **design patterns, SOLID, SQL (indexes, transactions), PHP7** etc.

August 2016 - Fabruary 2017 (7 months)

Full stack web developer in   **D2.digital** - digital agency with directions: web sites, mobile applications
and several own startups

I took part in 4 projects:

%   **LD** - project consists of 4 modile apps and a web app for promoters of JTI cigarette company. How it works - promoters with tablets and with mobile apps gather information about smokers and send it to server where it is retained in db. Then managers can see summary information organized in a tables about promoters, smokers, traders and so on. **I made by myself back-end for mobile apps and the whole web app.** Key complexities: **CORS middleware, raw SQL queries with joins and complex aggregation functions, XLS upload, multi auth, date filter etc.**

login - admin1@email.com | password - admin1
I worked with: **Laravel, Bootstrap, jQuery**

%   **Parent Club** - web site that offers parents to make use of services of some private companies that fit their children depending on age, sex and season. I made most of this project except several features. Key complexities: **multi auth for parents and for companies, facebook auth, AJAX photo uploader and so on.**

I worked with: **Laravel, Bootstrap, jQuery**

%   **Чистая линия** - web showcase of company products. **I customized CMS and integrated layouts.**

I worked with: **OpenCart**

%   **Axe Tattoo** - mobile app that add tattoo to a picture. I made several feaures such as **social networks auth** and some other logic.

I worked with: **Laravel**

June 2015 - August 2016 (1 year)

Freelance   - I worked as a web sites developer (PHP, Laravel, javscript).

During this time **I have developed 6 web sites.** And I want to accent that **all sites below are made by me 100%** starting from concept, design and ending to developing database architecture and coding all logic.

%   **mista.info** - site of interesting and useful places that can be added by usual authorised users and modified by administrator in admin panel. List of places that is shown to user depends on smart filters and these pages are formed in a way to be relevant to Google requests.

Site is built on Laravel, has MySQL database, has functional of uploading and sizing pictures, authentication, comments system, has javascript AJAX voting block and a lot of smart logic.

     %   **ziminadesign.com.ua** - site for interior designer.

It is landing page, with responsive design and some animations such as sliding menu, smooth scroll, parallax, Ken Burns effect and so on. And I made blog on October CMS.

     %   **lukovici.com.ua** - site-catalog for flower bulbs big distributor.

It is built on Laravel, has SQLite database, has convenient admin panel for adding and editing content, has filter of bulbs by letters, has responsive design and functional of sending letters from site with captcha and AJAX request/response.

     %   **amb.in.ua** - landing page of my web studio.

It has responsive design and a lot of animation such as preloader, sliding menu, animated SVG menu button, Ken Burns effect of background picture, parallax effect, smooth scrolling, customized Google Maps and so on.

     %   **pastrans.com.ua** - site for logistic company

Site is written on raw PHP. As background added HTML5 video and it has responsive design.

     %   **turdvir.com.ua** – site for recreation center at the Carpathian mountains.

Site is written on raw PHP. It is made on 4 languages. And has 3D flash plugin.

September 2011 - January 2015

I worked as **industrial automation engineer** at company   **UGOV-Proekt**

I took part in developing manufactures automation projects, adjusted electrical equipment, drew electrical schemes, negotiated with clients about technical and financial affairs.

My Education:

September 2005 - June 2011

I have got master degree at Kiev Polytechnical Institute at the faculty of Aircraft and Spaceship Systems, but several years ago I decided that I want to create beautiful and smart web applications,

so I started my web development self-education and up to the present time I have got knowledges
of quite a number technologies and I am not going to stop.

I have passed English courses at "American English Center" 5 years ago.

And I took short course of SEO at "Akademiya SEO"

Several more words about me:

I like to learn, I am able to self-learning and I learn quite fast , so if you will need me to know some
technologies I will got them as fast as I can.

and a little bit about my hobbies:

Lately I like to read books in English and to watch movies in English. I like wakeboarding at summer
and of course I like to write code during the whole year :) .
